

Managed Network Intrusion Detection Service

Cost-effective, Turnkey NIDS Solution

The NTT Security Managed Network Intrusion Detection Service provides organizations with an effective Network Intrusion Detection System (NIDS) solution, updates, tuning and 24/7 monitoring by our security experts.

Network intrusion detection systems (NIDS) help organizations monitor and respond to malicious network traffic. With the numerous web-based threats, APTs and malware facing organizations, NIDS is an integral part of an overall security strategy. NIDS is an important component for compliance with regulations such as the PCI DSS, GLBA, HIPAA/HITRUST, Sox and others. Keeping these solutions updated and patched while monitoring them 24/7 is, however, cost-prohibitive for many organizations. NTT Security reduces that burden for clients, with a cost-effective, turnkey NIDS solution.

Detect and Respond to Emerging Threats

The NTT Security Managed NIDS Service combines signature-based NIDS with monitoring and device management services. Using a combination of Snort, custom signatures and active threat intelligence, the NTT Security Managed NIDS Service delivers a comprehensive, turnkey solution for Network protection and compliance. Cross-client, active threat intelligence keeps signatures updated to detect emerging threats.

The solution is monitored 24/7 by trained NTT Security Security Operations Centers (SOCs) personnel to investigate and respond to security events. The combination of NIDS plus 24/7 monitoring gives clients a cost-effective solution for securing their environment.

Reduce Overhead and Improve Security

Managed NIDS Service clients can reduce their overhead while improving their security posture. NTT Security experts configure, tune, update and provide 24/7 monitoring for the devices. Updates and patches are applied by NTT Security, keeping the devices up-to-date and leaving internal staff free to focus on other priorities.

Continuous device management and rule maintenance provides a high level of effectiveness. A cross-client global view enables NTT Security to recognize and respond to emerging threats.

The ActiveGuard® Security and Compliance platform and SOC analysts help to identify false positives, therefore only notifying clients on actual security alerts. Clients have access to SOC analysts, the online ActiveGuard Portal and a dedicated Service Delivery Manager.

Managed NIDS Service Features Include:

- Turnkey NIDS Solution
- ActiveGuard Hybrid Appliance
- Real-time Visibility of Network-based Threats
- Expert Configuration and Tuning
- 24/7 Security Monitoring and Management
- Dedicated Service Delivery Manager
- Reporting
- Updates

Add On Features:

- Add vulnerability data to cross-correlate impact (on-target and off-target attacks)
- User identity and assets add context to normally IP-based alerts (LDAP or AD feed required)

Managed Network Intrusion Detection Service

A Partner You Can Trust

We don't believe that one size fits all. That's why we deliver a cybersecurity, risk management and compliance program that is as unique as your business. Our goal is to ensure that every organization develops the cyber resilience required to make the most of every business opportunity. We can provide the solution you need in the manner best suited to your specific situation and help you to avoid technical blind alleys, missed exits and roads that lead to nowhere.

The Full Security Life Cycle

NTT Security has created a Full Security Life Cycle model based on many years of providing efficient and effective security, risk and compliance services to organizations around the world. We deliver these services using local resources that leverage our global capabilities.

in both market-leading technology and delivering change, to reduce risk and make new implementations work seamlessly with your organization's business processes. Our security experts have the training and experience to ensure the right solutions are architected, configured and deployed to solve your security challenges.

Manage & Operate

High-performing security and compliance programs are built on processes and controls that are executed efficiently and consistently while producing the data necessary to monitor and manage their effectiveness within your organization. Effectively managing and operating the controls in your security and compliance program will increase your organization's understanding of your security posture, security and compliance exceptions, effectiveness of controls, and demonstrate cost-effectiveness to executive management.

Respond & Educate

Cyber resilience is based on the premise that incident avoidance is not always possible – you need to be ready and able to effectively respond to a security incident. Should the worst occur, our incident response team can be quickly engaged either remotely or on site. They will identify, document, contain and remediate a security incident to minimize the impact to your organization. We can also develop a comprehensive program for the security education of your organization.

About NTT Security

NTT Security seamlessly delivers cyber resilience by enabling organizations to build high-performing and effective security and risk management programs, with controls that enable the increasingly connected world and digital economy to overcome constantly changing security challenges. Through the Full Security Life Cycle, we ensure that scarce resources are used effectively by providing the right mix of integrated consulting, managed, cloud, and hybrid services – delivered by local resources and leveraging our global capabilities. NTT Security is part of the NTT Group (Nippon Telegraph and Telephone Corporation), one of the largest information and communications technology (ICT) companies in the world. For more information, visit www.nttsecurity.com.

The NTT Security Difference

We provide the necessary services across the entire information and communications technology (ICT) stack and throughout the Full Security Life Cycle. Our services portfolio covers every aspect of information security and risk management, from initial assessment through to strategic program planning, hands-on deployment and around-the-clock management and support. Service options include:

- Security Program Optimization and Enterprise Advisory
- Security Planning and Risk Assessment
- Risk and Compliance Management
- Security Solution Design and Integration
- Managed Security Services
- Cloud and Data Center Services
- Threat Mitigation and Remediation Strategy
- Incident Response and Forensics
