

Vulnerability Management

Flexible, Integrated Scanning Solutions with Advanced Features

Each regulatory and compliance framework requires frequent vulnerability scanning followed by detailed reporting and remediation tasks. Managers, auditors and executives must ensure that the organizational security posture meets compliance requirements, contractual obligations and risk management standards.

NTT Security Vulnerability Management (VM) provides the flexibility needed to create a scanning program specifically designed to fit an organization's requirements. Clients choose from a large menu of features including:

- Internal and external scanning
- PCI ASV scanning
- Managed or self-service scanning

Other services include managed application scanning, DHCP support, policy templates, change and enforcement control and asset-driven scanning services. Also available are optional consulting services to design and implement custom VM programs.

NTT Security vulnerability scanning can scale to any size organization, from small business to enterprise-level.

The NTT Security patented, cloud-based ActiveGuard® Security and Compliance Platform correlates scan data against monitoring data for advanced on/off target threat correlation and SOC threat profiling. This workflow minimizes the number of

false positives and allows IT staff to focus on actual threats.

Vulnerability scanning can be a commodity based service. There are often only small differences between the results provided by different tools, but there are major differences in how the tools operate and how easily you can manage the remediation process.

Scanning Vendor Integration

Qualys scanning utilizes the SaaS based platform to deliver Vulnerability Management services.

Features include:

- Fully automatic threat correlation for managed scans
- DHCP support
- Multiple report options: Executive, Technical, Scorecard, Patch, Top 20 and more
- PCI-compliant workflow via the Qualys PCI SaaS Portal

NTT Security supports the loading of Qualys self-service scan data through ActiveGuard for enhanced Vulnerability and Threat Correlation (VTC) services using the portal based API GUI loader.

Scanning Choices Include:

- Managed or Self-Service Scanning
- Internal and External Vulnerability Scanning
- Threat Correlation with ActiveGuard Data
- PCI Compliance-Specific Scanning and Reporting
- Qualys Integration with the Qualys Portal/VM
- DAST Application Scans via Optional MAS Service
- Qualys Based VM Tools
- Wide Array of Qualys Based Reports
- Policy Templates and Customization
- PCI Compliant Workflow
- DHCP Support
- Ticket System Integration

Vulnerability Management

A Partner You Can Trust

We don't believe that one size fits all. That's why we deliver a cybersecurity, risk management and compliance program that is as unique as your business. Our goal is to ensure that every organization develops the cyber resilience required to make the most of every business opportunity. We can provide the solution you need in the manner best suited to your specific situation and help you to avoid technical blind alleys, missed exits and roads that lead to nowhere.

The Full Security Life Cycle

NTT Security has created a Full Security Life Cycle model based on many years of providing efficient and effective security, risk and compliance services to organizations around the world. We deliver these services using local resources that leverage our global capabilities.

in both market-leading technology and delivering change, to reduce risk and make new implementations work seamlessly with your organization's business processes. Our security experts have the training and experience to ensure the right solutions are architected, configured and deployed to solve your security challenges.

Manage & Operate

High-performing security and compliance programs are built on processes and controls that are executed efficiently and consistently while producing the data necessary to monitor and manage their effectiveness within your organization. Effectively managing and operating the controls in your security and compliance program will increase your organization's understanding of your security posture, security and compliance exceptions, effectiveness of controls, and demonstrate cost-effectiveness to executive management.

Respond & Educate

Cyber resilience is based on the premise that incident avoidance is not always possible – you need to be ready and able to effectively respond to a security incident. Should the worst occur, our incident response team can be quickly engaged either remotely or on site. They will identify, document, contain and remediate a security incident to minimize the impact to your organization. We can also develop a comprehensive program for the security education of your organization.

About NTT Security

NTT Security seamlessly delivers cyber resilience by enabling organizations to build high-performing and effective security and risk management programs, with controls that enable the increasingly connected world and digital economy to overcome constantly changing security challenges. Through the Full Security Life Cycle, we ensure that scarce resources are used effectively by providing the right mix of integrated consulting, managed, cloud, and hybrid services – delivered by local resources and leveraging our global capabilities. NTT Security is part of the NTT Group (Nippon Telegraph and Telephone Corporation), one of the largest information and communications technology (ICT) companies in the world. For more information, visit www.nttsecurity.com.

The NTT Security Difference

We provide the necessary services across the entire information and communications technology (ICT) stack and throughout the Full Security Life Cycle. Our services portfolio covers every aspect of information security and risk management, from initial assessment through to strategic program planning, hands-on deployment and around-the-clock management and support. Service options include:

- Security Program Optimization and Enterprise Advisory
- Security Planning and Risk Assessment
- Risk and Compliance Management
- Security Solution Design and Integration
- Managed Security Services
- Cloud and Data Center Services
- Threat Mitigation and Remediation Strategy
- Incident Response and Forensics
