Kevin G. Coleman is a seasoned security technology executive with a comprehensive background in business operations and technology. He has devoted his career to the strategic management and application of security technology which aligns with business operations and drives stakeholder value through risk reduction. Having fifteen years of success in the development and implementation of cutting-edge business and technology strategies, he continues to work with innovative leaders in business, government and industry on strategic security initiatives. With strong expertise in assessments, analysis, design, development and implementation which deliver risk reduction, he has built a reputation for solving strategic client issues in the area of enterprise security and risk management.

Kevin Coleman is frequently interviewed and quoted in diverse publications such as Business Week, Washington Technology Review, USA Today, as well as being the Blog Master for DefenseTech.org covering cyber warfare. He served as a Science and Technology Advisor to the Johns Hopkins University Applied Physics Lab and consulted to DHS, TSA, DNI and many other organizations. He has testified before members of Congress on computer security and privacy as well as briefing the trusted advisors to the National Security Agency on Cyber Warfare and multiple defense industry contractors and corporate owners of our critical infrastructure.

Quote

"You can prove a computer has been hacked, but you can not prove a computer has not been hacked."

Kevin G. Coleman

Currently, he is a senior fellow with the Technolytics Institute and consults and advises on strategic technology and security. Prior to joining Technolytics, Kevin served as the Chief Strategist at Netscape. Before joining Netscape he was Vice President and Chief Strategist of Claremont Technology Group, business week's 44th fastest growing company. He joined Claremont from industry giant Computer Sciences Corporation where he was a Director in the National Consulting Practice. He began his career at the prestigious management consulting firm of Deloitte & Touche.

A Kellogg School of Management Executive Scholar, Coleman has authored dozens of articles addressing the strategic technology issues as well as two chapters in the "Encyclopedia of Computer Science and Technology." He co-authored the book "Reengineering MIS—the alignment of information technology and business operations." He is a frequent speaker at industry events which include the Intelligence Summit, SecTor Blackhat Canada, the World Trade Summit, and over twenty other industry and corporate events.
